

ABYE

FULL-STACK DEVELOPER / SOFTWARE ENGINEER

Surakarta, Indonesia / me@abye.dev / github.com/arsybai

PROFILE

A full-stack developer and software engineer building practical websites, web systems, automation, and the occasional curious experiment.

WHAT I BUILD

- Websites and web applications
- Backend and data systems
- Automation and integrations
- Deployment and operations

CURRENT WORK

I currently work as a freelancer while continuing to build and explore products of my own. I've been learning through building since 2018.

SELECTED WORK

Kabarsukowati / private client case study

A custom local-news publishing system built around editorial workflows and a public-facing news experience.

Akari Tab / open-source browser extension / [public repository](#)

A focused Chrome new-tab shortcut dashboard with responsive layout and automatically fetched favicons.

Java Language / open-source language experiment / [public repository](#)

A Python-based programming language experiment using Javanese words and expressions as executable syntax.

Flutter Spannable String / open-source Flutter package / [public repository](#)

A package that converts a compact custom string format into richly styled text spans.

TOOLKIT

JavaScript, TypeScript, Node.js, Express, Python, Flask, PostgreSQL, MySQL, Docker, Linux, Nginx, HTML, CSS, Git, and GitHub.

WORKFLOW

I use AI-assisted development for exploration, implementation, and review, while keeping architecture, validation, and final decisions intentional.

Open to interesting web builds.
